REF: OUT2021-0105

Dear Commissioner McGuinness,
Dear Commissioner Reynders,

In October 2020, the European Central Bank (ECB) issued the **Report on a digital euro**¹ aiming at consulting stakeholders, including the general public, on its project of a central bank digital currency (CBDC) in the Euro zone, which is expected to be available for retail payments ('digital euro'). In response to a significant decline in the role of cash as a means of payment, the digital euro would be an alternative to physical cash, not a substitute. As a digital form of the euro currency, the ECB want to "ensure that it was trusted from its inception and that this trust was maintained over time"².

In April 2021, the ECB published a **feedback of the public consultation**³. The main finding was the very predominantly expressed preference by the stakeholders and the public for privacy⁴ (43% as the most important feature)⁵. This result can be observed throughout the EU, population characteristics and in all categories of respondents (citizens, payment industry, merchants, NGOs, academics...). The majority of citizens declared they wanted "a digital euro focused on privacy and the protection of personal data, which can be used offline" (53%).

³ "the privacy of payment data is considered the most important feature, ranging from full privacy of transactions to the possibility that only low-risk small transactions are private", feedback document, page 3.
⁴ Although not representative of the EU population from a statistical point of view, the views collected nevertheless indicate issues that are important to the public.
